EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Irah Donner on May 14, 2007.

Cancel claims 28, 44, 45, and 46.

In claim 12, delete lines 1-11.

In claim 29, change dependency from claim 28 to claim 12.

In claim 12, insert the following:

----- A networked commercial interaction management method, comprising the steps of: assembling information into bundles, wherein each bundle comprises a data element, a data element reference and meta data describing the data element, wherein each data element remains resident on a node of a data owner in a network, wherein there is a plurality of versions of at least one of the bundles and wherein each of the plurality of versions is identified by a bundle version identifying signal,

periodically issuing bundle version identifying signals to the different nodes of the network, the bundle version identifying signals indicating changes to the data elements to the network nodes of accessors,

distributing the meta data and the data element reference from the bundles through the network, and

distributing copies of the data elements in the bundles assembled in the step of assembling from the network node of their respective data owners to the network nodes of accessors following selection of the data elements by the accessors using the meta data and the data element reference distributed through the network. -----

Allowable Subject Matter

2. Claims 12-27 and 29-33 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art, Bowman-Amuah (US 6,601,234 B1), teaches distributing information bundles from different ones of a first plurality of different networked users to different ones of a second plurality of different network users according to a machine-readable format that includes values for a plurality of content attribute descriptors, wherein it is stated that each data stream "includes an attribute descriptor defining elements of the data."

Bowman-Amuah lacks the teaching having a plurality of versions of at least one of the bundles, each of the plurality of versions being identified by a bundle version identifying signal, periodically issuing bundle version identifying signals to the different nodes of the network, the bundle version identifying signals indicating changes to the data elements to the network nodes of accessors, distributing copies of the data elements in the bundles assembled in the step of assembling from the network node of

their respective data owners to the network nodes of accessors following selection of the data elements by the accessors using the meta data and the data element reference distributed through the network.

The limitations lacking in the prior art, in combination with the other limitations clearly claimed for patent, are novel and unobvious.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher R. Buchanan whose telephone number is 571-272-8134. The examiner can normally be reached on Mon.-Fri. 9:00am - 5:30pm.
